Primary lithium-thionyl chloride (Li-SOCl\textsubscript{2}) high energy density battery pack.

A prismatic battery pack for a wide range of applications requesting low base currents combined with superimposed pulses. The LS 9 V version yields good voltage readings in a wide T range (-60°C to +85°C).

Main applications
- Memory back-up
- Alarm and security devices
- Smoke detectors
- Alarm equipment
- Industrial electronics
- Medical equipment

Key features
- Pack assembled from three ½ AA-sized (and UL-recognized) cells connected in series
- Component cells with stainless steel container and hermetic glass-to-metal sealing
- Plastic sleeve for battery housing
- Miniature snap-on terminals
- Non-flammable electrolyte
- Non-restricted for transport

</tbody>
</table>

Benefits
- High voltage, stable during most of the application’s lifetime
- Wide operating temperature range
- Low self-discharge rate (less than 1% per year of storage at +20°C)
- Easy integration into compact systems

Storage
- The storage area should be clean, cool (preferably not exceeding +30°C), dry and ventilated.

Warning
- Fire, explosion and burn hazard.
- Do not recharge, short circuit, crush, disassemble, heat above 100°C (212°F), incinerate, or expose contents to water.
- Do not solder directly to the battery pack.

* Typical values relative to cells stored for one year or less at +30°C max.
