

Uptimax

Compact racks

Reduce your installation footprint by up to 50%

Enjoy the installation benefits of Uptimax Maintenance Free batteries now available in a new generation of compact racks.

Saft's new compact rack solution can store more battery capacity in the same space through a reduction in height between the tiers.

As less real estate is required for the battery installation, costs are reduced significantly.

The ideal solution for space efficient installation

Designed and manufactured to the very highest standards, Saft's compact racks are designed for applications with limited available space, such as utility control houses, and offshore oil & gas installations.

Thanks to its cutting-edge maintenance-free technology, Saft's Uptimax requires no topping-up with water during its operational life time. This has led to the development of a new compact rack that does not require stepped-rows, enabling a reduced height between the batteries tiers.

Built to last

The new compact racks are designed to last 30 years and are particularly resistant to the effects of electrolyte exposure thanks to their epoxy powder coating.

Made out of steel and polyethylene, their construction guarantees outstanding robustness and excellent electrical insulation.

The combination of Saft Uptimax batteries and compact racks delivers the best-in-class solution for your Industrial Standby application.

Easy to size. Easy to install

Selecting the ideal compact rack solution is made simple thanks to Saft's battery sizing software "BaSiCs".

Furthermore, the use of welded gables allows easy and quick installation.
